

ACKNOWLEDGEMENT

It is our privilege to express our sincere gratitude to all those who have guided and supported us in the successful completion of this **DBMS (BCS403) Course Project Assignment**.

We express our heartfelt thanks to our Course Coordinator, **Mrs.Akilabanu** Pathan, for her valuable guidance, continuous support, and insightful suggestions throughout the development of this project. Her encouragement and direction greatly helped us in understanding and implementing various machine learning concepts effectively. We also extend our sincere thanks to the Course Coordinator for organizing and structuring this project assignment as part of Continuous Internal Evaluation, providing us an opportunity to gain practical exposure to real-world machine learning applications.

We are grateful to **Dr. Anil Korishetti**, Head of the Department, Computer Science and Engineering, S.G.B.I.T., Belagavi, for his constant support, encouragement, and valuable suggestions during the course of this work.

We would like to express our sincere thanks to the **Principal, Dr. B. R. Patagundi**, and the Management of **S. G. Balekundri Institute of Technology, Belagavi**, for providing the necessary infrastructure, facilities, and a conducive learning environment to carry out this project. We also thank all the teaching and non-teaching staff of the Department of Computer Science and Engineering for their support and cooperation.

Finally, we express our deep gratitude to our parents and friends for their constant encouragement, motivation, and support throughout the completion of this project

ABSTRACT

The rapid growth of digital technology and e-commerce has transformed the way people purchase goods and services. However, many local businesses still struggle to establish an effective online presence due to limited technical resources and digital accessibility. The project, “Local Marketplace for Convenient & Fast Online Shopping,” aims to develop a centralized online platform that connects local vendors and customers within a specific locality.

The system enables vendors to register, manage products, update inventory, and process customer orders efficiently. Customers can browse products, compare prices, add items to a cart, place orders, and track deliveries through a user-friendly interface. A Database Management System (DBMS) is used to manage data related to users, vendors, products, orders, payments, and reviews, ensuring security, consistency, and efficient data retrieval. The platform incorporates essential features such as user authentication, inventory management, order tracking, and customer feedback systems. By promoting local commerce, the system reduces delivery time, enhances customer convenience, and supports the growth of local businesses. The expected outcome is a secure, scalable, and efficient marketplace that improves the shopping experience while helping local vendors participate successfully in the digital economy.
